

10 Reasons why you should be considering Avigilon

Avigilon allows you to create multiple views of one screenshot, which means you can look at one incident in multiple different ways with optical zoom in/out to really identify what happened. The advanced search capability of Avigilon control centre allows you to find what you're looking for fast. Get to the truth of the matter and avoid costly liability claims.

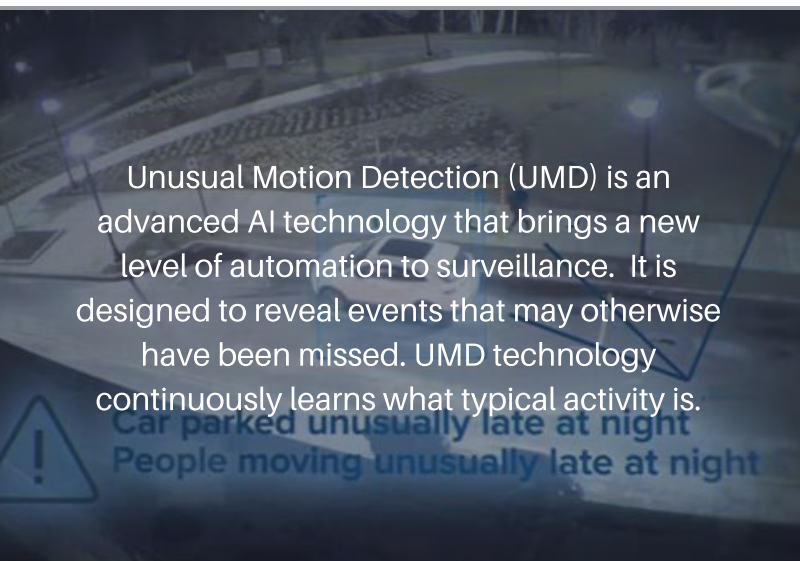

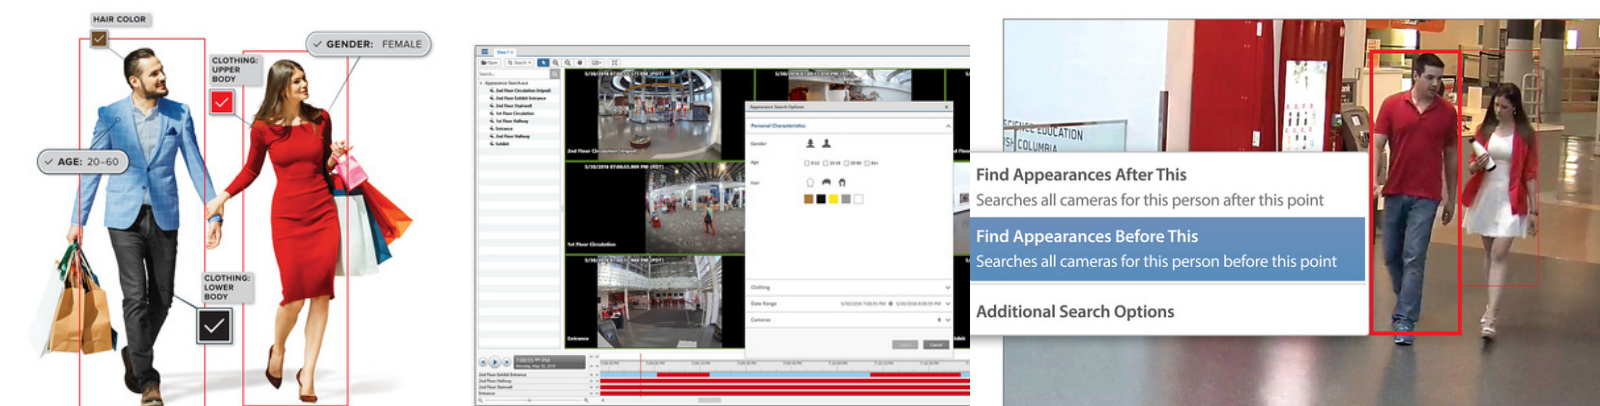

Clients use SenSys & Avigilon to reduce the rate of theft from their clients while increasing health & safety, thereby protecting their businesses from costly insurance claims.

Avigilon Appearance Search technology is the new way to search Video.

This innovative, deep learning artificial intelligence search engine sorts through hours of footage with ease to quickly locate a specific person or object in interest across the entire site. It dramatically improves incident response time and enhances forensic investigations by enabling operators to build robust video evidence and create a powerful narrative of events. You can search by person or physical description.

It also includes facial analytics in the search

Unusual Motion Detection (UMD) is an advanced AI technology that brings a new level of automation to surveillance. It is designed to reveal events that may otherwise have been missed. UMD technology continuously learns what typical activity is.

Avigilon complies with GDPR, all user actions are logged. Tiered access and user password protected.

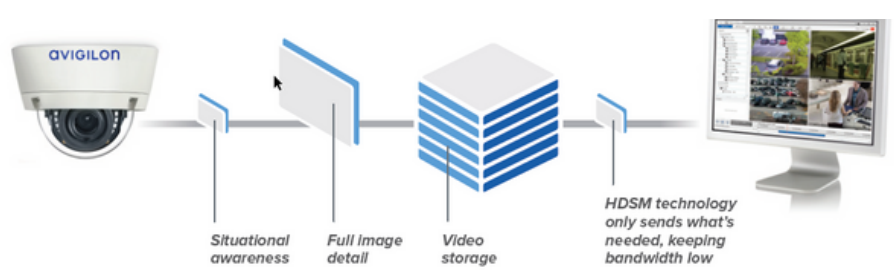

The Avigilon server provides superior performance and reliability for video surveillance. The server is also scalable as there is no limit on the number of cameras that can be added, future proofing your investment.

The system is based on a server with Avigilon software and not DVR's. This means the server has back up storage with RAID, a longer lifespan and as there are no recurring licence fees, the software can be kept up to date, year on year. Meaning in 10 years' time, you still have the latest and greatest Avigilon CCTV system.

High Definition Stream Management- the Avigilon cameras offer exceptional high definition video quality while reducing bandwidth from the camera to the ACC client. HDSM reduces bandwidth from server to client by dynamically sending the optimal image detail for the users viewing requirements. This means that there will be no buffering of footage, and everything is viewed in realtime.

Avigilon Control Centre is web based, so you can view the Avigilon content on your PC or Mobile. All you need is an internet connection. You can also keep your existing analogue cameras with Avigilon using the video encoders to extend your existing CCTV investment.

We at SenSys provide 24/7 365 support at a set cost per month. Our fully comprehensive support is designed to keep your organisation running smoothly with no added maintenance costs. We pro-actively monitor the system health and in the event of a server, software, control room or IP camera issues we are alerted 24/7 and we respond. Not having to wait for an operator to realise it's down.
